## Pain Language

---

*How MRO shop owners describe their problems — in their own words.*

### Operations & Workflow

- **"Honestly, I'm just drained."**
- "The relentless demand to put in more hours, to arrive early and stay late."
- "When I estimate five weeks for a project, I'm told to complete it in four."
- "They all have **3 month lead times** for any sort of repair."
- "Parts sourcing can be one of the most time-consuming steps in aircraft maintenance planning."
- "Maintenance planning often begins with a complex due list and multiple disconnected workflows."

### Software & Systems

- **"Incredibly powerful if you have someone who knows how to use it."**
- "Can be a bit complicated and manpower intensive at the start and more suited to larger fleets."
- "Pretty powerful but has a **good sized learning curve**."
- "May not be the best fit for MRO purposes." (on Jira/Asana)
- "Not cheap, but almost a must have."

### Financial Pressure

- **"A nightmare."** (describing running a maintenance business)
- "Stingy owners forced him into **personal debt** just to cover his employees' wages."
- "Hanger, tech pubs, tooling... all that is going to cost you in the +100k range."
- "Putting in more effort than what you can reasonably bill for."

### Staffing

- "Aside from my lead, who is often unavailable, I now possess the most experience in our shop."
- "Expendable resources." (how companies treat mechanics)
- "Insufficient effective leadership."

## Desire Language

---

*What they actually want — stated and unstated.*

### In Their Words

- **"Works well with small shops."**
- "User friendly — can track man hours, billable hours, time cards, customers."
- "Has all the ADs in one place. Can make invoices and work orders. Also has templates for printable logbook entries. **I love it.**"
- "For physically creating quotes and work orders and tracking parts, calibrated tools, etc, **nothing beats Corridor.**"
- "Tailored for aircraft maintenance." (not generic PM tools)

### What They Actually Want (Inferred)

- Predictable workflow instead of constant emergency scheduling
- One system: maintenance tracking + inventory + compliance + invoicing
- Low learning curve — mechanics can navigate without a full-time admin
- Affordable for 5-50 aircraft operations
- A business model that doesn't require personal financial sacrifice to survive

## Objection / Fear Language

---

- **"We've always done it this way."**
- "Switching systems is a nightmare and I can't afford the downtime."
- "I'll spend \$50K on another system that takes 6 months to implement and my mechanics won't use."
- "More suited to larger fleets." (fear tools aren't built for their size)
- "Incredibly powerful **if you have someone who knows how to use it.**" (fear they don't have that person)

## Identity Language

---

*How MRO shop owners see themselves.*

- Mechanics first, business owners second
- Safety is identity, not just compliance — keeping aircraft airworthy is personal

- Skeptical of vendors and salespeople — trust earned through competence, not marketing
- Independent — chose this path specifically to not work for someone else
- Frustrated but proud — the work is hard and the margins are thin, but they built something real

## Deep Competitor Profiles

---

### EBIS (now Veryon) — ~\$4,500/yr

#### What Users Love

- "EBIS is **the center of all we do** in our MRO business."
- "It basically **takes the place of 3 to 4 employees.**"
- "The user interface was so intuitive that the technicians figured it out within an hour or two."
- "We've become virtually paperless — a critical step forward."
- 4.8/5 overall, **5.0/5 customer support**

#### What Users Complain About:

- "Because the system has so many configuration options, it can be **a bit overwhelming to setup initially.**"
- Setup complexity — vendor recommends "relying on the implementation team"
- No AI-native capabilities — traditional database + UI approach

#### AeroKeeper's Edge Over EBIS

- **AI agents that DO the work** vs. software that TRACKS the work
- **No setup nightmare** — mechanic-friendly from Day 1 vs. "overwhelming to setup"
- **Predictive intelligence** — EBIS tracks what happened; AeroKeeper forecasts what's coming
- **Integration layer** — works alongside EBIS, not against it

### Quantum MX (FLY Online Tools) — \$79-189/mo

#### What Users Love

- "Easy web interface. Powerful work order and parts dashboards."
- "Ability to create PDF logbook entries."
- "Inventory management and tool calibration tracking."
- Team-based pricing with unlimited users — cost-effective
- 4.5/5 overall, 92% user satisfaction

#### What Users Complain About:

- **"Does not include airworthiness directive or service bulletin lookup research**, but has features to load them yourself." (#1 complaint)
- Audit Trail rated **1.0/5** — weak change-tracking
- Status tracking rated only 2.7/5
- No AI capabilities — manual workflows throughout

### AeroKeeper's Edge Over Quantum MX

- **AI-powered due list processing** — automated work orders vs. manual creation
- **Built-in AD/SB integration** — directly addresses their #1 complaint
- **Parts Boss Agent** — active sourcing intelligence vs. basic inventory tracking
- **Audit trail & compliance** — AI-structured logbooks vs. their worst-rated feature (1.0/5)
- **Predictive capability** — forecasts vs. reports

## Head-to-Head Comparison

| Dimension             | EBIS                        | Quantum MX                        | AeroKeeper                                 |
|-----------------------|-----------------------------|-----------------------------------|--------------------------------------------|
| Due list processing   | Manual                      | Manual                            | AI Due List Agent — minutes, not hours     |
| Parts sourcing        | Inventory tracking + manual | Basic inventory                   | Parts Boss compares quotes from one screen |
| AD/SB compliance      | FAA compliant, manual       | No built-in lookup (#1 complaint) | AI-assisted compliance tracking            |
| Setup complexity      | "Overwhelming to setup"     | Low learning curve                | Mechanic-friendly from Day 1               |
| Predictive capability | None                        | None                              | Forecasts maintenance trends               |
| Architecture          | Database + UI               | Database + UI                     | Coordinated AI agents                      |
| Audit trail           | Standard                    | Rated 1.0/5                       | AI-structured digital logbooks             |
| Integration           | Veryon suite                | QuickBooks                        | Works alongside existing MRO systems       |
|                       |                             |                                   |                                            |
|                       |                             |                                   |                                            |

## Key Messaging Themes

| Theme                 | Message                                              | Why It Works                                                                          |
|-----------------------|------------------------------------------------------|---------------------------------------------------------------------------------------|
| 1 Built for your size | "Right-sized for 5-50 aircraft"                      | Every owner feels software is either too big (airlines) or too generic (not aviation) |
| 2 Minutes, not hours  | "Due list to work order in minutes"                  | The single most compelling, measurable differentiator                                 |
| 3 One screen          | "Not six phone calls"                                | Parts sourcing pain is visceral and daily                                             |
| 4 Mechanics first     | "Designed for the hangar, not IT"                    | Every owner was a mechanic first — respect their time                                 |
| 5 No IT required      | "If you can read a due list, you can use AeroKeeper" | Fear of implementation complexity is the #1 blocker                                   |

# B2B Sales: Conversion Delay Findings

Why high CTR isn't converting to demos for 2-3 weeks — and how to fix it.

## Root Causes of the 2-3 Week Delay

- 1. **Contact page says "will get back to you"** — introduces a queue, not a conversation
- 2. **No calendar link anywhere on the site** — every CTA routes to a passive form with 9 checkboxes
- 3. **No proactive follow-up on clicks** — waiting for self-serve form fills instead of proposing times
- 4. **Curious but not convinced** — high CTR = interest, but landing page doesn't convert interest to urgency
- 5. **Internal alignment** — MRO owners need to float the idea with their team before committing calendar time

## Top 5 Fixes (Prioritized)

| # | Fix                                                                                                                                                                                                         | Impact                                          |
|---|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------|
| 1 | <b>"Due List Diagnostic" as lead magnet</b> — prospect sends their due list, AeroKeeper AI processes it and returns structured analysis. They experience the product on THEIR data before talking to sales. | Eliminates "is this worth my time?" hesitation  |
| 2 | <b>Direct calendar link in every email + on site</b> — replace "Learn more" with "Grab a 20-min walkthrough" + Calendly link with 2-3 hardcoded time slots                                                  | Removes the form-to-callback delay entirely     |
| 3 | <b>Instant follow-up on clicks</b> — when someone clicks but doesn't book, trigger immediate email: "Saw you checked out AeroKeeper — Tue 10:00 or Thu 15:00?"                                              | Captures interest at peak moment                |
| 4 | <b>20-second Loom video on follow-up</b> — prospects are 3x more likely to attend when they've seen a real person                                                                                           | Builds trust, reduces "is this spam?" objection |
| 5 | <b>Preempt the IT/security concern</b> — add "Sandbox environment. No production data. 20 minutes max. Bring your IT person if helpful."                                                                    | Removes "I need to check with IT first" delay   |
