

STRATEGIC REVIEW

AeroKeeper

Prepared for Daryl Rouse | August 13, 2026
Prepared by Olivia Rouse, Etcetera Enterprises

This document is structured as: **What's Working** → **What We Found** → **What We Recommend** → **Expected Impact**. Every recommendation is grounded in data — from your demo meetings, competitor research, industry forums, and B2B conversion benchmarks. Nothing here is a criticism of what's been built. AeroKeeper is a strong product — every demo you've run has resulted in a pilot or migration. The opportunity is making the website and email convert at the same rate the demos do.

Part 1: What's Working

3/3	6	4	High
Demos → Pilots or Migrations	Active Locations	Industry Events in 2026	Email CTR

The Product Sells in Demos

- **Vision Aviation:** Pilot authorized. Sending CAMP due list for test.
- **Onsite Aircraft Service:** Pilot authorized. Transitioning from Quantum MX.
- **Islander Aviation:** Full EBIS migration. Founder pricing locked.
- Every demo has moved to next stage — exceptional close rate.

Competitive Positioning Is Real

- Islander Aviation called EBIS **"archaic, non-user-friendly, limited API, no AI"**
- Vision Aviation said Quantum MX **"lacks certain advanced features"**
- Onsite Aircraft considered Corridor just for QuickBooks — AeroKeeper solved it
- Patent-pending AI agent architecture — no competitor has this

Features That Win Deals

- Due List Agent processing CAMP lists → work orders in minutes
- Parts Boss comparing quotes from one screen
- Voice-to-text work logs with AI professionalization
- Multi-language translation (won Islander Aviation)
- QuickBooks integration (won Onsite Aircraft)
- Customer portal — 48-hour access, per-line-item sign-off
- AI quality assessment scoring on work logs

Part 2: What We Found

Finding 1: The Website Doesn't Communicate What the Demos Communicate

9 features that win demos aren't mentioned on the website:

1. Language translation (won Islander Aviation)
2. Voice-to-text work logs
3. AI quality assessment scoring
4. 8130 form validation
5. Management by exception philosophy
6. Multi-customer invoicing
7. Voice calling AI agent (phones suppliers directly)
8. Data migration support from EBIS/Quantum MX
9. Customer portal details (48-hr access, per-line-item approval)

Finding 2: The Contact Page Is Creating the 2-3 Week Delay

- ~~"Request Information Here"~~ — passive headline
- ~~"Our representative will get back to you"~~ — introduces a queue
- 9 checkbox options = decision paralysis
- No calendar link — no way to instantly book
- No social proof, no video, no value proposition on the page

B2B research: *"Get back to positive replies in under 5 mins. Book the meeting at the moment of peak interest, not days later."*

Finding 3: Cold Emails Are "We"-Focused

Metric	Current	Best Practice
"We/our/us" count	14 times	3-4 max
"You/your" count	4 times	10+ times
CTA	"Learn more"	Direct calendar link or "reply"
Pricing mention	In first email (50% off)	After value is established (Email 3+)

Format	HTML with branded header	Plain text (2x reply rate, 88% inbox)
--------	--------------------------	---------------------------------------

Finding 4: Testimonials Are Unattributed

Current: *"This platform has completely transformed how we manage MRO services."* — no name, no company, no result.

Available from Breno: **"The system helps owners turn time into profit. With 40% under-capacity for aircraft mechanics, you can't afford to lose hours to paperwork."** — real person, real shop, 1 year on platform.

Finding 5: "aircrafts" → "aircraft"

Appears multiple times. Aviation professionals notice. Quick fix, credibility signal.

Part 3: What We Recommend

Recommendation 1: Rebuild Contact Page as a Conversion Engine

Element	Current	Recommended
Headline	"Request Information Here"	"See Your Due List Become Work Orders in 20 Minutes."
Left side	Product image	20-sec Loom from Daryl + 3 proof bullets
Right side	4 fields + 9 checkboxes	Calendar embed. 3 fields. One choice: "20-Min Demo" or "Quick Question"
Below form	Nothing	"Send your due list — we'll process it free."
Response	"Will get back to you"	Instant booking — no delay
Social proof	None	Breno quote + stats

Recommendation 2: Update Homepage Copy

- Hero: "AI Agents That Turn Due Lists Into Work Orders — In Minutes, Not Hours."
- Move event banner to slim top bar — unbury the Before/After section
- Rewrite agent cards outcome-first
- Add the 9 missing demo-winning features
- Feature Breno as real, attributed testimonial
- Fix "aircrafts" → "aircraft"

Recommendation 3: Rewrite Cold Email Sequence

3-email sequence: **Pain** → **Edge** → **Proof**. Plain text. You-focused. One CTA per email.

Recommendation 4: Replace Unattributed Testimonials

Get real quotes from Breno, Vision Aviation, and any shop with specific metrics.

Recommendation 5: Add Calendar Links to Every CTA Sitewide

Every button currently routes to the passive form. Replace with direct calendar links. Keep form as secondary.

Part 4: Expected Impact

Change	Current	Expected
Contact page → calendar	2-3 week delay	Same-day booking
Email rewrite (you-focused + plain text)	High CTR, low form fills	Higher reply rate, faster demos
Homepage copy update	Traffic not converting	Clearer value → more engagement
Attributed testimonials	Zero credible social proof	Trust signals MRO owners respect
Due List Diagnostic lead magnet	"Book a demo" (high friction)	"Send your due list" (low friction)

Core thesis: AeroKeeper converts at a high rate in demos. Every change above is designed to make the website and emails do more of the demo's job — so that by the time someone books a call, they're already halfway sold.

Part 5: Sample Cold Email Sequence

EMAIL 1: THE PAIN (EDUCATIONAL)

Subject: How long does your due list take?

Plain text | No images | No branded header

{{contact.first_name}},

Quick question — when your team gets a 50-item due list from CAMP or Traxxall, how long does it take to turn that into a quoted work order?

Most shops I talk to say hours. Some say days. One director of maintenance told me his team spends more time on paperwork than on the aircraft.

We built AeroKeeper specifically to solve that. Our AI agents process a due list and generate a structured work order with quotes in minutes — not hours. No manual re-entry. No disconnected systems.

I'm not going to pitch you in this email. I just want to know: **is due list processing a bottleneck for your operation, or have you solved it another way?**

Hit reply — even a one-line answer helps me understand what shops like yours are dealing with.

Daryl Rouse

AeroKeeper | Built by MRO, for MRO

(904) 424-7389

Coleman Assess Phase: Feel SEEN (names their artifact + system + pain) ✓ | Remove RISK ("not going to pitch you") ✓ | Paint FUTURE ("minutes, not hours") ✓

EMAIL 2: THE EDGE (COMPETITOR-AWARE)

Subject: What your maintenance software can't do yet

Plain text | No images

{{contact.first_name}},

If you're running CAMP, Traxxall, Quantum, or EBIS — your software tracks maintenance. That's its job and it does it.

But here's what it doesn't do:

- It doesn't take a due list and automatically generate work orders and quotes
- It doesn't compare parts quotes from multiple suppliers on one screen
- It doesn't write logbook entries for your techs and score them for quality
- It doesn't call vendors by phone to check 8130 availability and warranty terms

Those are things your team does manually. Every day. For hours.

AeroKeeper doesn't replace your current system — it **adds an AI layer on top of it**. Our agents handle the administrative work so your mechanics can maintain aircraft instead of fighting software.

If that gap sounds familiar, I'll show you exactly how it works on a real due list in 20 minutes: [\[CALENDAR LINK\]](#)

No slide deck. No sales pitch. Just the product running on real data.

Daryl Rouse

AeroKeeper | (904) 424-7389

Coleman Assess Phase: Feel SEEN (names their exact systems + what those systems can't do) ✓ | Remove RISK ("doesn't replace" + "20 minutes" + "no slide deck") ✓ | Paint FUTURE ("mechanics maintain aircraft instead of fighting software") ✓

EMAIL 3: THE PROOF (SOCIAL PROOF + DUE LIST DIAGNOSTIC)

Subject: One shop saved 10-20 hours a week

Plain text | No images

{{contact.first_name}},

I'll keep this short.

A Part 145 shop owner who's been on AeroKeeper for almost a year told me: **"The system helps owners turn time into profit. With 40% under-capacity for aircraft mechanics in the industry, you can't afford to lose hours to paperwork."**

His team uses AeroKeeper's AI agents to:

- Process due lists into work orders in minutes
- Source parts from one screen instead of calling 6 vendors
- Generate and score logbook entries automatically
- Track technician time against targets in real time

He went from Quantum MX to AeroKeeper. Another shop is migrating off EBIS right now.

Here's what I'd like to offer: **send me your due list**. Any format — CAMP export, Traxxall, even a spreadsheet. I'll run it through AeroKeeper and send you back a structured work order with quotes. Free. No call required.

If you like what you see, we'll talk. If not, you got a free work order out of it.

Reply with your due list or grab 20 minutes here: [\[CALENDAR LINK\]](#)

Daryl Rouse

AeroKeeper | (904) 424-7389

Patent-pending AI. NBAA member. 6 locations live.

Coleman Assess Phase: Feel SEEN (peer language from real shop owner) ✓ | Remove RISK ("Free. No call required.")
✓ | Paint FUTURE ("turn time into profit" + specific outcomes) ✓

FAQ (Objection Handling)

Question	Answer
Do I need to replace my current software?	No. AeroKeeper works alongside CAMP, Traxxall, EBIS, and Quantum MX. It adds AI on top of what you already use.
How long does setup take?	Most shops are running within days, not months. We handle data migration.
Is this built for shops my size?	AeroKeeper is designed for independent shops running 5-50 aircraft. Not airlines. Not enterprise fleets.
What does it cost?	We're offering Founding Customer pricing — significantly below list rate, locked in perpetuity. We'll discuss on the call.

Form Specifications (GHL)

Field	Type	Required
Full Name	Text (single field)	Yes
Email	Email	Yes
Phone	Phone	Yes
"What's eating the most time in your shop?"	Dropdown (see below)	Yes

DROPDOWN OPTIONS

- 1. Turning due lists into work orders
- 2. Sourcing and comparing parts quotes
- 3. Writing logbook entries and compliance docs
- 4. Tracking technician time and labor
- 5. Managing work cards and task assignments
- 6. Closing out maintenance and final sign-off
- 7. All of the above — I need the full picture

HOW THE DROPDOWN MAPS TO AGENTS (INTERNAL — NOT SHOWN TO PROSPECT)

Dropdown Option	Maps to Agent	What Daryl Demos First
Turning due lists into work orders	Due List Agent	Process their CAMP/Traxxall list live
Sourcing and comparing parts quotes	Parts Boss Agent	Show quote comparison + voice calling AI
Writing logbook entries and compliance docs	Logbook Entry Agent	Generate entries, show AI quality scoring

Tracking technician time and labor	Time Clock Agent	Dashboard, shift tracking, SMS alerts
Managing work cards and task assignments	Work Card Agent	Structured work cards, real-time labor data
Closing out maintenance and final sign-off	Close Out Agent	Documentation, verification, RTS workflow
All of the above — I need the full picture	Full demo	20-min overview hitting their top 3

The question — "What's eating the most time?" — is in their language. It names a pain, not a feature. It gives Daryl pre-call intel on what to demo first AND provides data on which pain points drive the most interest.

Below calendar: "Have a partner, ops manager, or IT lead who should join? Add them when booking or reply to your confirmation email and we'll coordinate."

Remove: Website field, all 9 checkboxes, "How can we help?" multi-select

Add: Calendar embed, pain-point dropdown, guest invite blurb above, confirmation step, auto-response with Daryl's Loom

GHL Automation

- 1. Calendar booked → assign to Daryl → tag "demo-booked"
- 2. Instant confirmation email: Zoom link + 3-bullet agenda
- 3. 24-hour reminder email
- 4. 1-hour reminder SMS
- 5. Post-demo: auto-send Due List Diagnostic offer if no conversion
